eAppendix. *Current Procedural Technology (CPT)* Codes Used to Identify Cardiac Stress Tests

This supplementary material has been provided by the authors to give readers additional information about their work.
eAppendix. Current Procedural Technology (CPT) Codes Used to Identify Cardiac Stress Tests

Exercise electrocardiography stress tests were identified by CPT codes 93015-93018. Nuclear single photon emission computed tomography (SPECT) myocardial perfusion imaging tests were identified by CPT codes 78460, 78461, 78464, and 78465 until January 2010, and 78451-78454 thereafter. Stress echocardiography was identified by CPT codes 93350-93352. Cardiac computed tomography angiography was identified by CPT codes 0145T-0150T from January 2006 (the first year codes were available) until January 2010, and 75574 thereafter. Nuclear positron emission tomography myocardial perfusion imaging was identified by CPT codes 78491 and 78492. Stress cardiac magnetic resonance imaging was identified by CPT codes 75559 and 75563.
