This supplementary material has been provided by the authors to give readers additional information about their work.

SUPPLEMENT

eFigure: Case 2. A. H&E staining of original excision from 2008 showed well differentiated SCC. (20X) B. H&E staining of excision from 2010 recurrence showed moderately differentiated SCC with lymphocytes infiltration. (10X) C. H&E staining of the most recent excision shows atypical cells forming well defined nests surrounded by dense lymphocytic inflammation. (40X) D. Neoplastic cells of the biopsy show positive immunoreactivity for EMA. (10X)
