eFigure 1 – Funnel Plot for Studies on the Association between B-HPV types only and cSCC

Funnel Plot for Type genus beta
(Egger test: P=0.11, Begg test: P=0.04, TrimFill: No.Missing=2)

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 2 – Funnel Plot for Studies on the Association between B-HPV type 5 only and cSCC

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 3 – Funnel Plot for Studies on the Association between B-HPV type 8 only and cSCC

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.

Funnel Plot for Type 8
(Egger test: P=0.18, Begg test: P=0.28, TrimFill: No.Missing=1)
The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 5 – Funnel Plot for Studies on the Association between B-HPV type 17 only and cSCC

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs
eFigure 6 – Funnel Plot for Studies on the Association between B-HPV type 20 only and cSCC

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 7 – Funnel Plot for Studies on the Association between B-HPV type 24 only and cSCC

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 8 – Funnel Plot for Studies on the Association between B-HPV type 36 only and cSCC

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 9 – Funnel Plot for Studies on the Association between B-HPV type 38 only and cSCC

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 10 – Funnel Plot for Studies on the Association between B-HPV and cSCC: Seroprevalence subgroup

Funnel Plot for All 81 Sero-prevalence Datasets
(Egger test: P=0.71, Begg test: P=0.49, TrimFill: No.Missing=5)

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 11 – Funnel Plot for Studies on the Association between B-HPV types only and cSCC: Seroprevalence subgroup

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 12 – Funnel Plot for Studies on the Association between B-HPV type 5 only and cSCC: Seroprevalence subgroup

Funnel Plot for Type 6 (Seroprevalence)
(Egger test: P=0.2, Begg test: P=0.48, TrimFill: No.Missing=1)

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 13 – Funnel Plot for Studies on the Association between B-HPV type 8 only and cSCC: Seroprevalence subgroup

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 14 – Funnel Plot for Studies on the Association between B-HPV type 15 only and cSCC: Seroprevalence subgroup

Funnel Plot for Type 15 (Sero-prevalence)
(Egger test: P=0.84, Begg test: P=0.54, TrimFill: No.Missing=0)

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs
The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 16 – Funnel Plot for Studies on the Association between B-HPV type 20 only and cSCC: Seroprevalence subgroup

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.

Funnel Plot for Type 20 (Sero-prevalence)
(Egger test: P=0.48, Begg test: P=0.92, TrimFill: No.Missing=0)

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 17 – Funnel Plot for Studies on the Association between B-HPV type 24 only and cSCC: Seroprevalence subgroup

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs

Funnel Plot for Type 24 (Sero-prevalence)
(Egger test: P=0.63, Begg test: P=0.6, TrimFill: No.Missing=0)
eFigure 18 – Funnel Plot for Studies on the Association between B-HPV type 36 only and cSCC: Seroprevalence subgroup

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 19 – Funnel Plot for Studies on the Association between B-HPV type 38 only and cSCC: Seroprevalence subgroup

Funnel Plot for Type 38 (Sero-prevalence)  
(Egger test: P=0.98, Begg test: P=0.92, TrimFill: No.Missing=2)

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
eFigure 20 – Funnel Plot for Studies on the Association between reported B-HPV and cSCC: Seroprevalence subgroup using ELISA only

Funnel Plot for ELISA Datasets
(Egger test: P=0.03, Begg test: P=0.25, TrimFill: No.Missing=5)

The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs
The vertical solid line represents the summary effect estimates, and the dotted lines are pseudo 95% CIs.
