Supplementary Online Content

eFigure. Subpial cortical lesion visualized at 7 T with T2 FLASH and T1 MPRAGE.

This supplementary material has been provided by the authors to give readers additional information about their work.
eFigure. Subpial cortical lesion visualized at 7 T. T2 FLASH (A) impressively depicts the subpial cortical lesion (black arrowheads) with great distinction visualizing a strong hypointense rim. Contrarily, T1 MPRAGE (B) delineates the subpial lesion (black arrowheads) weakly and is not able to depict the whole subpial area of the lesion.
