Supplementary Online Content

eFigure 1. Distribution and size of the cumulative lesions seen on gadolinium-enhanced T1-weighted images (A) and on T2-weighted images (B) for the twelve CLIPPERS patients.

eFigure 2. Characteristic punctuate and curvilinear enhancing lesions in the pons of the twelve CLIPPERS patients using gadolinium-enhanced T1-weighted imaging. For patient 6, one enhancing lesion localized in the cerebellum seems to be connected to a vein extending to the straight sinus.

This supplementary material has been provided by the authors to give readers additional information about their work.
