Supplementary Online Content

eFigure. Recovery of LOTUS concentration in CSF after relapse in RRMS patients with remission.

This supplementary material has been provided by the authors to give readers additional information about their work.
Figure 1. Recovery of LOTUS concentration in CSF after relapse in RRMS patients with remission. LOTUS concentration in the three RRMS patients who maintained a continuous remission state after relapse was examined. Light gray bars represent LOTUS concentration in CSF at the relapse phase and black bars represent LOTUS concentration in CSF in the remission phase. An immunoblotting of LOTUS from patient 3 is shown in the lower panel. The numbers on top of the bars represent LOTUS concentration in CSF.
