
**eFigure.** Photographs of Subjects Without Corneal Ulcers Taken With the Corneal CellScope

This supplementary material has been provided by the authors to give readers additional information about their work.
eFigure. Photographs of Subjects Without Corneal Ulcers Taken With the Corneal CellScope

Photographs of subjects not found to have corneal ulcers by the on-site ophthalmologist taken with the white light (left) and fluorescein (right) attachment. The absence of an epithelial defect was correctly identified by all 3 graders for 9 pairs of photographs (Panels A through I), by 2 graders for 1 pair of photographs (Panel J), and by only 1 grader for 1 pair of photographs (Panel K)
