Supplementary Online Content

**eFigure.** Projection-Resolved Optical Coherence Tomography Angiograms From a Healthy Subject and Diabetic Patients of Different Retinopathy Severity

This supplementary material has been provided by the authors to give readers additional information about their work.
**eFIGURE 1.** Projection-resolved optical coherence tomography angiograms from a healthy subject and diabetic patients of different retinopathy severity. The innerretinal angiogram (first column) is segmented into 3 slabs: superficial vascular complex (SVC), intermediate capillary plexus (ICP), and deep capillary plexus (DCP) with automatically detected nonperfusion areas in blue. DR: diabetic retinopathy; NPDR: non-proliferative DR; PDR: proliferative DR.
