
eTable. Rome III criteria for abdominal pain related functional gastrointestinal disorders

This supplementary material has been provided by the authors to give readers additional information about their work.
### eTable: Rome III criteria for abdominal pain related functional gastrointestinal disorders

<table>
<thead>
<tr>
<th>Irritable Bowel Syndrome (IBS) *</th>
<th>Functional Dyspepsia (FD)*</th>
<th>Functional Abdominal Pain (FAP)* and Functional Abdominal Pain Syndrome (FAPS)*</th>
<th>Abdominal Migraine**</th>
</tr>
</thead>
</table>
| Abdominal discomfort (an uncomfortable sensation not described as pain) or pain associated with 2 or more of the following at least 25% of the time:  
  • Improved with defecation  
  • Onset associated with a change in frequency of stool  
  • Onset associated with a change in form (appearance) of stool  
  • No evidence of an inflammatory, anatomic, metabolic, or neoplastic process that explains the subject’s symptoms | Persistent or recurrent pain or discomfort centered in the upper abdomen (above the umbilicus)  
  • Not relieved by defecation or associated with the onset of a change in stool frequency or stool form (ie, not IBS)  
  • No evidence of an inflammatory, anatomic, metabolic, or neoplastic process that explains the subject’s symptoms | FAP  
  • Episodic or continuous abdominal pain  
  • Insufficient criteria for other FGIDs  
  • No evidence of an inflammatory, anatomic, metabolic, or neoplastic process that explains the subject’s symptom |
| FAPS  
  • Must include childhood functional abdominal pain at least 25% of the time and 1 or more of the following:  
    • Some loss of daily functioning  
    • Additional somatic symptoms such as headache, limb pain, or difficulty sleeping |  |  |  
  • Paroxysmal episodes of intense, acute periumbilical pain that lasts for 1 hour or more  
  • Intervening periods of usual health lasting weeks to months  
  • The pain interferes with normal activities  
  • The pain is associated with 2 or more of the following:  
    • Anorexia  
    • Nausea  
    • Vomiting  
    • Headache  
    • Photophobia  
    • Pallor  
  • No evidence of an inflammatory, anatomic, metabolic, or neoplastic process considered that explains the subject’s symptoms |

*Criteria fulfilled at least once per week for at least 2 months before diagnosis  
**Criteria fulfilled 2 or more times in the preceding 12 months
