Arch Gen Psychiatry. 2009;66(4):431-441
eFigure. Resting-state functional connectivity maps between each of the right cingulate regions of interest and the rest of the brain. dACC indicates dorsal anterior cingulate cortex (ACC); dPCC, dorsal posterior cingulate cortex (PCC); MCC, middle cingulate cortex; oACC, rostral ACC; RSC, retrosplenial cortex; sACC, subcallosal ACC; and vPCC, ventral PCC. See Figure 2 for explanation of colors used.
