Supplementary Online Content

**eFigure 1.** Vertex-wise results of comparison participants and probands with attention-deficit/hyperactivity disorder.

**eFigure 2.** Data from the study scanners.

This supplementary material has been provided by the authors to give readers additional information about their work.
eFigure 1. Vertex-wise results of comparison subjects and probands with attention-deficit/hyperactivity disorder (ADHD). The upper maps show the same vertex-wise results (false discovery rate [FDR] < 0.05) of the contrast between comparison subjects (n = 80) and ADHD probands (n = 59) shown in Figure 1 of the main article without covarying IQ; the lower maps show the results of including full-scale IQ at the 41-year follow-up as a covariate.
eFigure 2. Data from the study scanners. Upper row maps show combined data from both scanners (3T Siemens Trio and 3T Siemens Allegra; Siemens Medical Solutions USA Inc, Malvern, Pennsylvania). The lower maps show results obtained from the Allegra only. In both cases, false discovery rate (FDR) of 0.05 has been applied.
