This supplementary material has been provided by the authors to give readers additional information about their work.
eAppendix

Diagnoses in Intermittent Explosive Disorder
And in Psychiatric Control Subjects

By definition, all IED subjects had current and lifetime Axis I disorders. Current Axis I disorders were as follows: Any Depressive Mood Disorder = 19; Any Anxiety Disorder = 27; Non-IED Impulse Control Disorder = 1; Eating Disorder = 6; Somatoform Disorder = 1. Lifetime Axis I disorders were as follows: Any Depressive Mood Disorder = 47; Any Anxiety Disorder = 33; Substance Dependence Disorder = 31, Non-IED Impulse Control Disorder = 6; Eating Disorder = 14; Adjustment Disorder = 3; Somatoform Disorder n = 1. In addition, all IED subjects met DSM-IV criteria for Axis II Personality Disorder as follows: a) Cluster A = 18; b) Cluster B = 44; c) Cluster C = 24. The remaining 16 were diagnosed as Personality Disorder-Not Otherwise Specified.

Among the PC subjects, 43 had current, and 56 had lifetime history of an Axis I disorder. By definition, PC subjects could not have a current or lifetime history of IED. Current Axis I disorders were as follows: Any Depressive Mood Disorder = 9; Any Anxiety Disorder = 30; Non-IED Impulse Control Disorder = 1; Eating Disorder = 3; Adjustment Disorder = 3. Lifetime Axis I disorders were as follows: Any Depressive Mood Disorder = 21; Any Anxiety Disorder = 31; Substance Dependence Disorder = 7; Non-IED Impulse Control Disorder = 2; Eating Disorder = 5; Adjustment Disorder = 8. In addition, 38 of the PC subjects met DSM-IV criteria for Axis II Personality Disorder as follows: a) Cluster A = 2; b) Cluster B = 13; c) Cluster C = 13. The remaining 13 were diagnosed as Personality Disorder-Not Otherwise Specified.
